01 / APPROVED DIRECTION

A neighborhood that makes music.

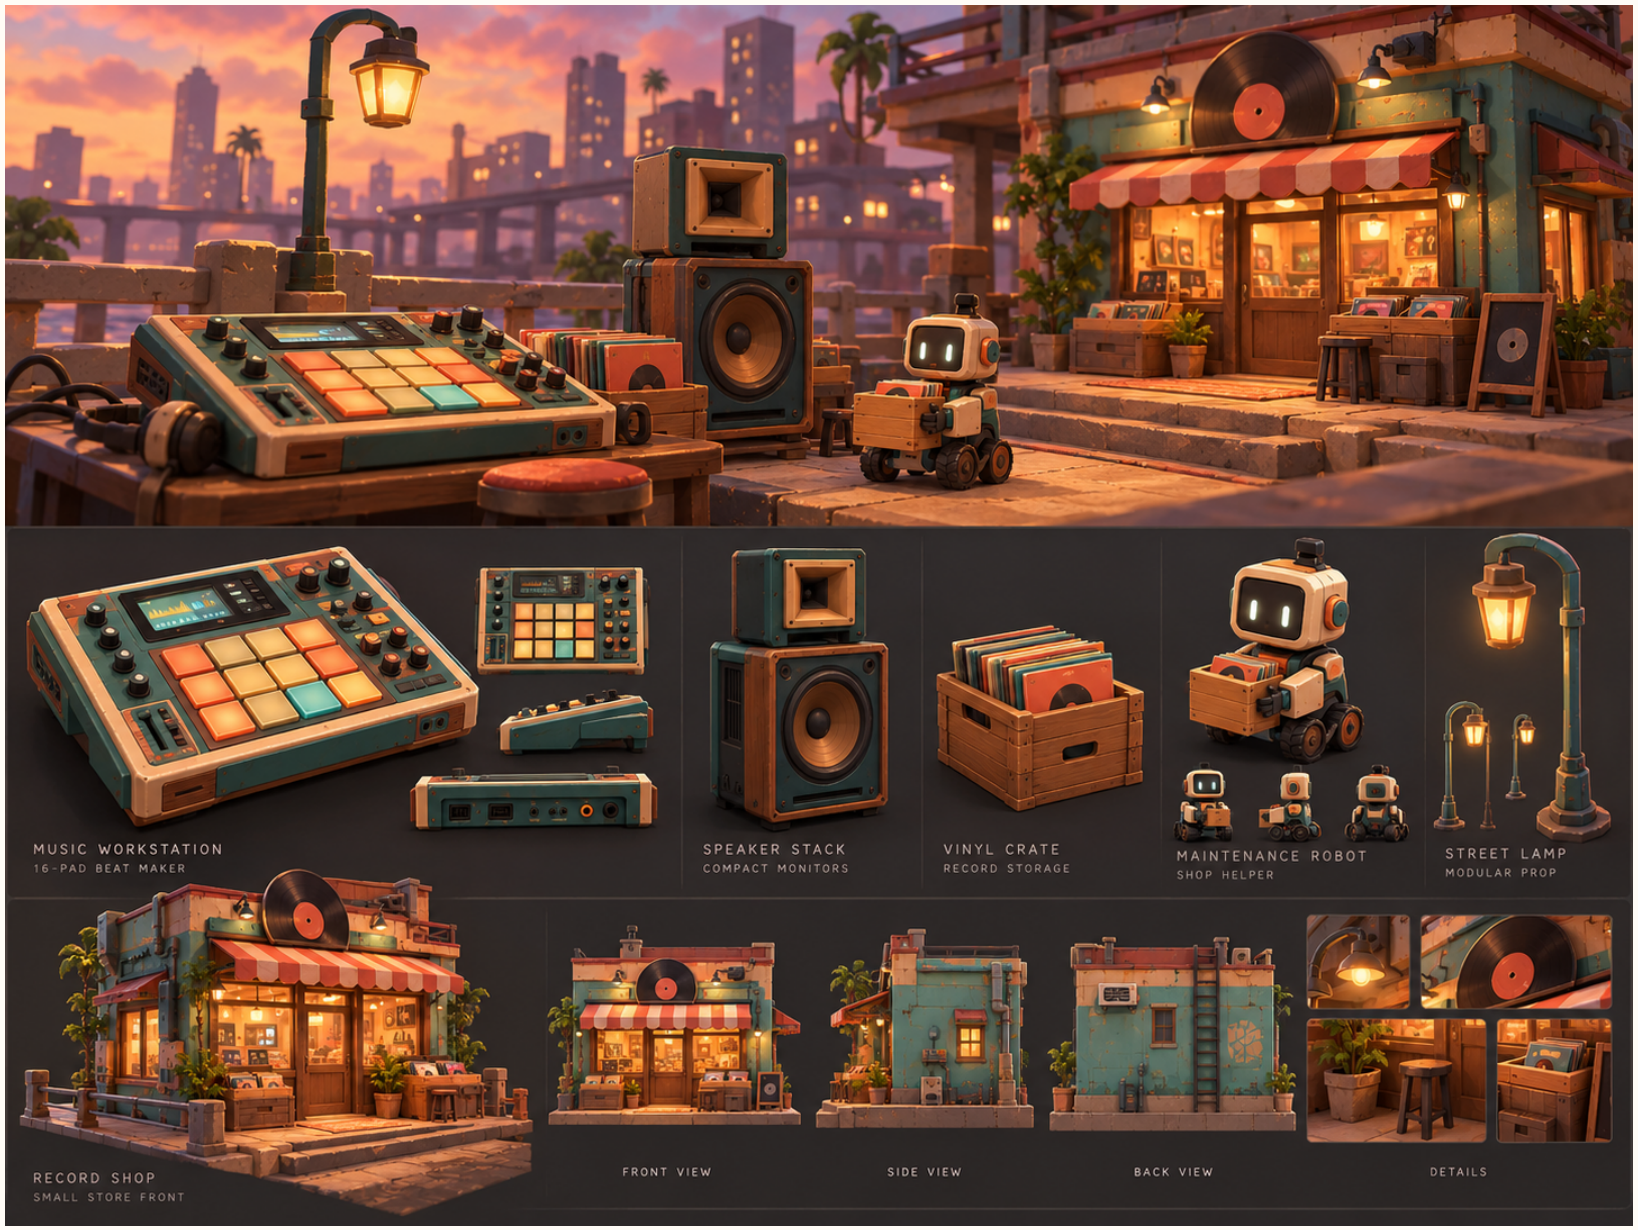

A usable MPC-style instrument inside a cozy creative neighborhood. Everyday sounds become personal music; that music brings the workshop to life. The world supports creation rather than replacing it with a rhythm-copying game.

Preserve the selected reference. Resolve its geometry deliberately. Build the instrument before the city.

This artbook uses only the user-selected board and crops of it. It does not present new approved concept views or finished game assets. All dimensions, budgets and the zone name are production proposals.

02 / REFERENCE AUTHORITY

Read the mood. Do not copy the mistakes.

Visual authority

Warm teal and cream equipment; coral awning; amber lamps; soft industrial forms; substantial wood; a friendly utility robot.

Not an engineering drawing

The board contains view inconsistencies. It does not define exact scale, UVs, topology, rear panels or pad count.

Production authority

Exactly 16 pads. One coherent instrument. Exact door clearances. Separate moving parts and collision. These requirements override any generative ambiguity.

No collage-to-3D shortcut

Whole-board input can generate fused props and a ground base. Prepare isolated references before Tripo.

03 / FORM AND DETAIL

Large shapes carry the identity.

Style crop, not an approved production layout.

Primary: sturdy and tactile

Use broad boxy masses, shallow wedges, rounded corners and substantial mounting points. A prop must be recognizable as a silhouette before texture detail.

Secondary: function explains form

Speaker drivers, grips, feet, screen recesses and control decks are larger than tiny bolts. Leave clean space where the player acts.

Tertiary: restrained history

Wear appears at handles, workbench edges and feet. A few repair patches tell the story; uniform grunge does not.

Reject

Knife-edge supports, dense micro-greebles, random holes, spaghetti wires, ornate kitbash detail and surfaces with no quiet areas.

A model with fewer faces is not automatically good. Preserve silhouette and function before reducing numbers.

04 / AUTHORED PALETTE TARGETS

Warm neutrals first. Teal gives the equipment its identity.

Workshop teal #2F5C58	**Faded teal** #6F9186	**Warm cream** #E8D8B7	**Dusty coral** #CA7453
Amber light #F3B65F	**Walnut** #79513B	**Warm stone** #B79C7E	**Graphite** #2C3031

Surface family

Painted metal: matte to satin, not mirror chrome. Wood: broad grain and softened edges. Rubber: dark, dense and tactile. Fabric: simple stripe or weave. Glass: restrained; no stacks of transparent layers.

Color hierarchy

Use only the materials appropriate to a prop. Not every object needs every color. Amber and coral are accents; the neighborhood is not a rainbow of equally saturated assets.

These are project palette targets inspired by the board, not calibrated samples or automatic accessible UI color pairs.

Lighting is authored in the scene. Do not bake golden-hour illumination or hard directional shadows into the base-color map.

05 / FIRST-ZONE COMPOSITION

One workshop, one discovery loop, one listening court.

Space	Starting extent	Composition and gameplay purpose
Arrival promenade	64 x 12 studs	Frame the warm shop opening and vinyl sign. Keep water behind a visible railing.
Shop + workshop	32 x 24 shell; 24 x 20 usable target	Two creation stations; clear access around the workbench; warm focal light.
Sound alley	12 x 32 studs	A short, readable loop: metal hit, vent thump and helper chirp. Return view points toward the shop.
Listening courtyard	28 x 24; stage 12 x 8 target	Intimate opt-in listening. Preserve space for audience, camera and circulation.
Distant city	Backdrop only	Low-contrast skyline and bridge. No implied explorable interiors or navigable roofs.

The proposed public envelope remains roughly 112 x 80 studs, excluding the water and skyline. These areas share circulation/setbacks; they are not a solved floor plan. Validate in a graybox before locking dimensions.

The stage is intentionally smaller than in v0.1. A 24 x 20 stage inside a 28 x 24 court leaves too little useful social space.

06 / INSTRUMENT AND INTERFACE

The sampler must be a real instrument.

Proposed world size: 6 W x 1.25 H x 4 D studs.

Exact controls, not AI approximations

Generate/model the shell, then build the pad grid deterministically. Keep the screen, pad surfaces and labels separate so behavior and localization remain correct.

01	02	03	04
05	06	07	08
09	10	11	12
13	14	15	16

Canonical UI top view: 01 is top-left; 16 is bottom-right. The world-to-UI mapping must agree.

The 3D object invites interaction; a touch-friendly screen interface handles precise creation. Avoid tiny clickable 3D labels. Record, play, muted, occupied and unavailable must be explicit states, not inferred from amber glow.

The style can be imperfect and handmade. Control counts, mappings and user feedback cannot.

07 / HERO FAMILY

Different functions. One visual family.

Speakers	Crates	Robot
Large driver and square horn. Teal cabinet, warm edging. Cone movement is optional and separate from collision.	Broad wood slats; chunky handhold. Group record sleeves into an insert. Original artwork is added in a shared atlas.	Cream head and teal body; two-bar face. Utility proportions, no weapons or mech silhouette. Rigid, deliberate parts and simple locomotion.

Reuse material families and proportions; do not paste the same decorative wear onto every asset.

08 / ARCHITECTURE LANGUAGE

A playable workshop, not a miniature scene.

The crop sets storefront character, not final module geometry.

Exact kit beneath expressive dressing

Use 8-stud bays on a 4-stud planning grid. Wall, corner, portal, window, door, roof, awning and sign remain separable. Keep exact mounting faces even where the visible front has character.

Protect the route

Starting door clearance: 6 wide x 10 high studs. Provide a ramp as well as steps. Validate with the supported avatar and camera before detailed art.

No fused storefront generation

Do not ask Tripo for the shop, pavement, plants, interior, sign and lights as one mesh. Build the shell deterministically and place approved props.

Restoration changes dressing, light and selected indicators. It does not need a duplicate destroyed building.

09 / LIGHT AND ATMOSPHERE

Dusk is a lighting condition, not a texture.

Neutral approval

Inspect base color, silhouette, material boundaries and wear with even light. No warm baked shadows, halo painted into lantern glass or permanent reflections on rubber.

Dusk approval

Warm interiors and lamps against a cooler distant city. Keep paths and controls readable. Music adds restrained local response; it does not turn the entire scene into a flashing nightclub.

No neutral-light render is supplied here. Codex must capture it from the actual asset. On lower graphics settings, the lantern and robot face still read through shape, value and an explicit state indicator.

10 / STATE LANGUAGE

Let the player see what the music is doing.

Object/system	Quiet/dormant	Active/restored	Unavailable
Sampler	Readable controls and status text	Distinct recording vs playback; activity follows real state	Occupied, disconnected or loading message; never a mysterious dark screen
Workshop	Visible destination even before repair	Selected practical lamps, sign center and resonator activate	No fake locked entrances if the space is part of the tutorial route
Discovery object	Consistent icon and recognizable sound source	Matching preview + collected badge; preview remains available	Explain missing permissions/state without changing the art identity
Robot	Warm readable face and waiting posture	Head/listen pose and small local reaction	Does not block the door or force follow behavior
Shared stage	Comfortable neutral courtyard	Opt-in listening and modest accents	Clearly muted/idle at performance end

Musical/session state drives visuals. Visual effects never become the audio clock.

Do not use color alone to signal recording, saving, selection or a collected sample. Pair color with shape/icon/text, and keep feedback usable when effects are disabled.

11 / TRIPO REFERENCE POLICY

One clean object in. One reviewed candidate out.

Input class	Treatment	Use
Selected board	Retain as the visual authority; never as a single-object generation input	Art review and family consistency
Included style crops	Preserve provenance; resolve missing/contradictory geometry first	Reference preparation only
Approved isolated reference	Neutral light, complete silhouette, no labels, no scene, no neighboring prop	Single-image generation after preflight
Consistent multiview set	Separate front/side/back images with matching structure and lighting	Only the current documented multiview schema
Exact geometric components	Model/script from counts, dimensions, pivots and interfaces	Pads, module boundaries, portals, colliders, rig joints

A good prompt describes the intended object and its relevant material zones. It does not guarantee clean topology, independent moving parts, shared UVs or correct scale. Tripo outputs remain candidates until DCC and Studio review.

Do not regenerate a whole model to fix a label, a pad count, a pivot or a color patch.

12 / ART ACCEPTANCE

Approve the asset where players will use it.

Visual checks

Same family as the approved image. Strong silhouette. Broad quiet material regions. Restrained wear. No extra scene elements. All sides coherent. No hardcoded labels that promise absent behavior.

Gameplay checks

Exact controls and counts. Readable discoverable objects. Clear states. Navigable space. Effects-off still works. No loudness/popularity requirement for story progress.

Evidence, not optimism

Keep the source reference, raw model, cleanup revision, neutral view, dusk view and actual Studio capture. Show measured geometry/maps and use real asset IDs.

First approval group

Sampler housing plus deterministic 4 x 4 controls; curved street lamp; one exact wall/window/awning corner. Approve them together before generating the rest of the family.

A successful API task is not a finished Roblox asset.

Read the production atlas and source ledger next. Reference image supplied and selected by the user; all crops derive from it. Names, palette values, dimensions and budgets are authored production proposals. No Tripo generation, Studio import or target-device benchmark was performed while preparing this pack.
